

Powerful, intelligent and easily scalable media storage for demanding workflows, including Archiware P5 integration

With GB Labs storage products, content creation teams can work on files and projects together for increased productivity and creative freedom.

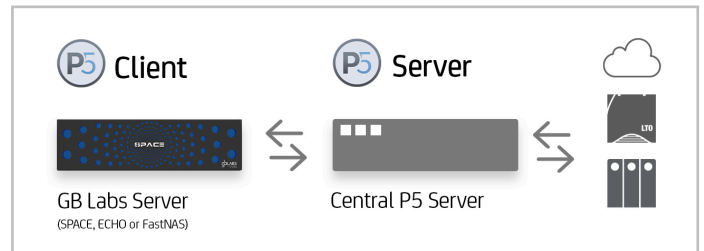

On SPACE, ECHO and FastNAS Mac, Linux, and Windows, clients offer simultaneous access to projects using 1 to 100 GB connections. Users' access rights, storage quotas and permitted bandwidth can be configured. GB Labs focuses on easy installation, maintenance and upgrade of storage. Moving data between tiers of GB Labs' units is optimised by the system's intelligence to increase workflow efficiency.

With **Archiware P5** running natively on GB Labs devices, production is protected in multiple ways. The integrations tab allows users to configure the P5 client, so that it can access files on GB Labs' storage products for backup, archive or both.

The integration with Archiware P5 offers maximum security for both ongoing and completed productions. Customers have the flexibility to choose from different storage categories for Backup and Archive, such as disk, LTO tape and cloud storage.

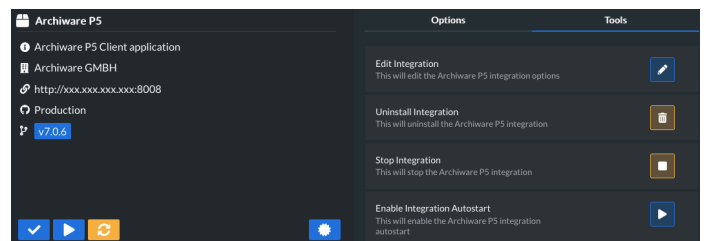

P5 Backup protects ongoing production against accidental deletion, file corruption and any other mishaps. The scheduled automatic Backup is the best way to keep files safe. The optimised restore process hands any file back identically to continue with production (including xattributes, acls etc.). P5 Backup works with disk, tape and cloud storage to provide maximum flexibility and fulfill any requirements. Encryption is available for both, transfer and storage.

P5 Archive migrates finished projects and their assets to disk, tape or cloud to preserve them for long-term. Finding files later is easy with its MAM-like features, customisable metadata fields, thumbnails for still images and proxy clips for videos. Combined search and visual browsing help to locate files when they are needed for re-use, reference and monetisation.

The integration of the P5 client running natively on GB Labs SPACE storage is an efficient way to protect production and provide business continuity. Numerous options within P5 allow for enormous flexibility in configuration, setup, access, segmentation, storage and policies.

Having one solution for Backup and Archive increases efficiency and keeps things simple. Powerful features of P5 support future growth and scalability into PBs.

Benefits of the Solution:

- ✓ Compatible with virtually any tape hardware (LTO-2 to LTO-8)
- ✓ Customisable metadata fields and menus
- ✓ Thumbnails of images
- ✓ Proxy clips of video files
- ✓ Combined search
- ✓ Long Retention & Offsite Storage
- ✓ Versions & Snapshots
- ✓ User Restore
