Archiware P5 Data Mover
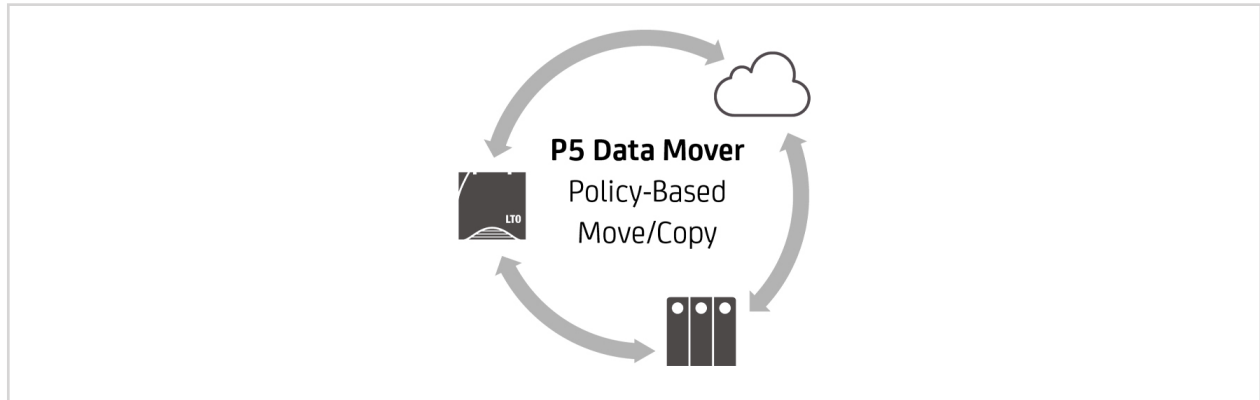

P5 Archive add-on for future-proof archive & flexible storage strategy

P5 Data Mover
Policy-Based
Move/Copy

The **P5 Data Mover** is an extension of the P5 Archive module. It offers policy-based moving and copying of archived data between tape, cloud and disk storage. This HSM-like extension offers flexibility for any storage strategy. Data can easily be migrated or copied between storage tiers:

Moving: Data is moved from existing to new archive storage. After completion, all data is deleted on the original archive storage.

Copying: Data is copied to create redundancy on a new archive storage. The previous archive storage remains unchanged.

This tiered storage concept allows data to be placed on different storage media according to its value, reuse and costs incurred. A migration plan runs periodically and selects data according to a predefined age.

Key Features of P5 Data Mover

✦ Migrate and/or copy data between archive storage tiers

✦ Disk, LTO & Cloud

✦ Policy-based

✦ Flexible storage strategy

✦ Filter-based query

✦ Job history

✦ Optimized cost

✦ Migrate from/to any LTO generation
