

Professional Backup with P5 and Drobo

Drobo storage and P5 software work hand in hand and make saving data really easy

Backup of Workstations and Laptops

Drobo 800i/1200i plus P5 Backup2Go

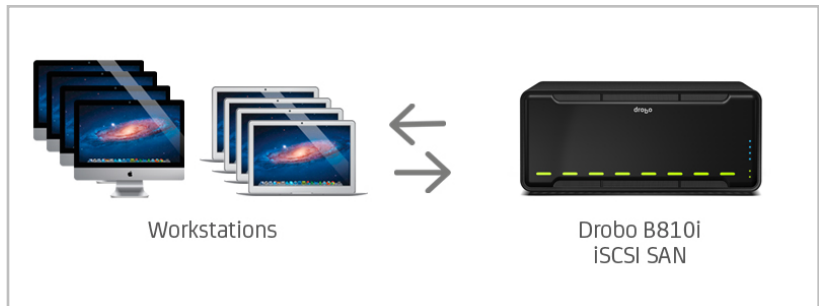

Important data is increasingly created and edited while away from the office. Mobile workstations and free-lancers have traditionally been a challenge for the Backup since they are available only part time. **P5 Backup2Go** was developed exactly for these requirements. Wether in the office, in the hotel, with a customer or at home, the first Backup runs within minutes. **Drobo** is the ideal storage for this task and immediately ready for use through its BeyondRAID technology.

All selected data is saved regularly in the background. P5 Backup2Go builds on technology from our products used in large corporations. Easy installation, overview and restore in the browser make Backup2Go an easy tool to use. Drobo is the storage that simply works. Now also for the whole company.

Company Backup for Workstations

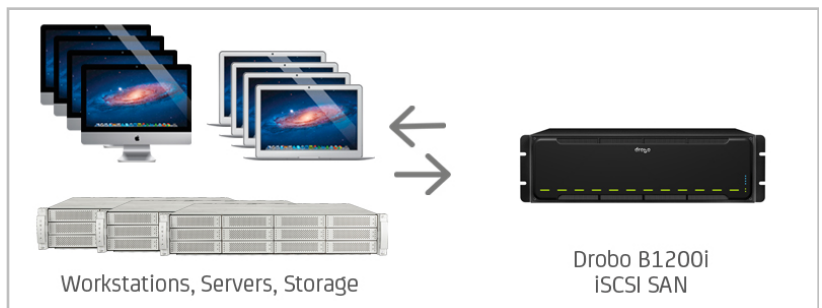

Fully automatic Backup including centralized overview, auto-completion after interruption, all optimized for laptops.

Drobo is the ideal professional storage with BeyondRAID technology and immediately ready for use, only minimal configuration necessary, flexible expansion with hard disks of all sizes and manufacturers.

Company Backup for Workstations and Servers

Fully automatic Backup including centralized overview, auto-completion after interruption, server Backup with file versions and snapshots. Drobos professional storage with iSCSI, flexible expansion with hard disks of all sizes and manufacturers.

Compatibility:
